VISITORS WELCOME

Our show gardens are located on Walker Ave., two and one-quarter miles north of West Leonard St. city limits. Call and get acquainted. It pays.

My gardens and field plantings are at their best usually from September 15th on, as most of the late plantings are in bloom then. Many varieties bloom early in August even if I do not finish planting until July 1st.

1945 GREETINGS

Again I have harvested a good crop of roots better than 1943 — as the frost was nearly four weeks later on all field planted roots.

The season was dry for about five weeks but I had the ground well prepared before planting and kept it well cultivated to hold the moisture until the fall rains came to finish them in grand shape.

This year there is a great shortage of roots in many localities where in the past I could buy a few roots to finish filling orders if I ran short but now I have to depend on my own stocks therefore I have withdrawn several varieties to grow more stock for next year.

Have discontinued the shipping of plants for 1945 on account of labor conditions, but will grow them as usual in my gardens.

Thanking you for your past patronage and trusting I may have the opportunity to fill your future orders.

Yours respectfully,

A. T. EDISON.

COLLECTION ROOT NOTE:—When ordering these collection, suggest at least one substitute, as we may be sold out of some variety ordered and have to substitute with one of equal or of more value.

ROOT NOTE:—In the shipping of roots especially early in the season we try to send roots showing eye or spot where eye is indicated, but some eyes will not develop even then and we will gladly replace when notified. All growers have the same trouble. As I get roots, I pay \$10.00 to \$25.00 each, and if they fail to eye, I return them for replacement. Roots should not be planted in wet, cold ground as they will rot even if eyed. They will grow a lot faster when the soil has warmed up.

PLANTING INSTRUCTIONS

Roots

Roots should be planted in trenches or holes, four inches deep in heavy soil and six inches deep in sandy soil laid flat down [not on end] and covered with earth not over two inches in depth, filling in as the plant develops. Where drainage is poor, do not plant so deep and keep a furrow open between rows to facilitate drainage in wet weather.

You cannot expect a dahlia to grow in any wet soggy ground or expect replacements when planted in ground in this condition. Wait a few days for ground to dry out somewhat.

1945 Plant Note

Owing to the labor conditions, I am not listing plants, but will grow them as usual from the later introductions and they can be had when called for at my greenhouse.
